

fire

fire

There is a school of thought here at **Leighs Paints** which says when a **genuine passion** moves you, say it loud and say it proud. Our passion is **fire protection coatings**, and **our mission** is to **provide** you with **world class intumescent**s.

Designed and tested to exceptionally high standards, our FIRETEX® range offers fire protection solutions, which chemically react in the event of a fire to protect the steel, and lengthen the time taken for it to reach its critical failure temperature.

Whether your project is civil construction or oil, gas and petrochemical, we understand that to protect your assets, you require the very best in fire protection coatings; and we aim to please.

FIRETEX® FX Range

Designed specifically with the needs of the **civil construction industry** in mind, the **FX Range** provides **cost effective**, yet aesthetically pleasing solutions which allow the **steel elements** of your project to become **architectural features**.

Providing solutions for both shop and site applications, be it solvent or water based, our thin film coating compositions can protect steelwork from cellulosic fires from 30 up to 120 minutes.

The benefits:

- The quick drying composition allows greater application efficiency both off and on site.
- Its unique low dry-film thickness makes it more cost effective as required thicknesses can be achieved in fewer applications.
- Thanks to the durability of the range, damage during transportation is limited,
- as are the harmful effects of most weather conditions.
- Good viscosity allows for a smoother, more aesthetically pleasing finish.
- The ease of application allows your project to be completed quicker, whilst not compromising the finish.

FIRETEX® M90 Series

The **oil, gas** and **petrochemical** industries pose some of the **greatest challenges** when it comes to **fire protection**. Prone to some of the most **extreme fire conditions**, the industry requires **high performance** intumescent coatings that can be **relied on**.

The FIRETEX® M90 Series provides a solvent free solution, with a low water uptake and inherent corrosion protection capabilities, making it the ideal choice where protection against hydrocarbon pool fire, jet fire or blast is required.

The benefits:

- Lower required thicknesses and reduced mesh reinforcement, make this solution a more cost effective option.
- Its lightweight, fast curing composition makes it easy to apply and damage resistant when compared to other passive fire protection systems.
- The M90 Series contains no solvents, which reduces its environmental impact, whilst meeting the necessary regulations.
- Tough and durable, the M90 Series will last the life of your asset with minimal maintenance.

The importance of testing and assessment

In the end, it's all about the product. Does it deliver what it promises? Will it perform when you need it most? The answer is **YES!**

All FIRETEX® materials are tested to the highest international standards, both in our onsite FIRETEX® Test Centre and by globally recognised third party accreditors. As we put the range through rigorous tests to ensure that the coatings perform in all conditions, you can feel confident in its ability to protect your assets.

With the added bonus of three state of the art furnaces onsite, we have the opportunity to be pioneers in our field, to push the boundaries and develop new products faster.

More than protective coatings

At Leighs Paints we believe in providing you with more than just coatings; which is why we have teams of dedicated people in all corners of the world, on hand to help you with every aspect of your project.

If it's fire protection you seek, why not take full advantage of our Fire Estimation and Engineering team, whose unique blend of structural engineering experience and fire expertise, allow them to assist you with fire engineering solutions as early as concept stage. By utilising our state of the art software, the **FIRETEX®** Design Estimator, calculating fire protection requirements has never been as straightforward.

Whether you require the support of our Technical Services team, the guidance of our Customer Services department, or you'd simply like the reassurance that our dedicated Supply Chain team can provide you with your products on time and in full, Leighs Paints will provide complete back up at all stages.

The Leighs Paints' way

We love paint. It's our passion, it's what we do. In fact we love it so much that we have been leading the way in the protective coatings industry since 1860.

Our unique culture and exceptional service, has ensured that our customers return to us time-after-time. Perhaps this is the best testament to our ability to produce world class protective coatings, which exceed customer's expectations.

To put it simply we love what we do, always have, always will. It's the Leighs Paints' way.
